

## Get Exploring!

Here's a new creature I managed to photograph on my travels to Africa last year. It is the extremely rare Rhiswanozebtah. It is believed to contain DNA from four different animals: rhinos, swans, zebras and cheetahs – which gives it its name.

Now you know it's a mix of  
rhino plus  
swan plus the  
o of rhino plus the start of  
zebra and the end of  
cheetah,  
you will be able to pronounce it easily!

I have written a paper about it, using my research, to help you find out more about this wonderful animal. Read on and discover the world of the Rhiswanozebtah!
